

## SAFETY BY DESIGN

- Safety mechanism is built into the tube holder
- Studies show that most needlestick injuries occur within seconds after needles are removed from patients\*
- Safety mechanism is activated BEFORE needle is removed, effectively reducing exposure to contaminated sharps
- Needle retracts directly from patient into tube holder, protecting users from both ends of contaminated needle
- Prevents recapping and needle removal
- Single-use holder complies with safety regulations and prevents cross contamination

BLOOD COLLECTION TUBE HOLDER

# ADVANTAGE

## Designed for Clinician and Patient Safety

End cap is flexible  
and can be easily  
closed from any  
position

Clear, blue tube holder  
allows easy visualization  
of tube and blood return

Compatible standard,  
multiple sample needles

Allows users to keep  
both hands behind  
needle when activating  
safety mechanism

Needle is retracted directly  
from patient, virtually  
eliminating exposure to  
contaminated needle

Protects users from both  
ends of contaminated needle

1 Securely thread multiple  
sample blood collection  
needle into tube holder.

2 Perform  
venipuncture  
per protocol of  
institution.

3 Once last tube has been removed  
and needle is still in patient's  
vein, close endcap. Needle  
automatically retracts out of  
patient's vein into tube holder.

4 Dispose of  
VanishPoint<sup>®</sup>  
tube holder in an  
appropriate sharps  
container.
