UNCOMPROMISING SAFETY FOR CLINICIANS AND PATIENTS

VANISHpoint®
IV CATHETER-PORTED

The New Standard for Safety®

1

Perform venipuncture, observing for blood return. Advance the catheter slightly to assure full entry into the vein.

2

Holding the flashback chamber stationary, disengage the hub from introducer needle and advance the catheter into the vein.

3

Before withdrawing the introducer needle from the catheter, depress the color coded end of the needle housing to activate the automated retraction.

4

The introducer needle will retract into the housing. Dispose of the introducer needle in an appropriate sharps container.

To inject medication using the injection port, use aseptic technique to:

Remove the medication cap. Securely attach the luer end of the syringe to the injection port and inject medication.

After injection, immediately close the injection port cap.

the VANISHPOINT[®] ADVANTAGE

A safety IV catheter with injection port
featuring the patented VanishPoint[®]
automated retraction

VanishPoint[®] ported IV catheters are available in a variety of lengths and gauges

Capped injection port allows for safe and easy medication injection

Clear finger grips and flashback chamber allow for handling ease and flashback visualization

Sharp introducer needle for insertion ease and patient comfort

Wings provide stabilization and hub securement

Catheter hub, wings and housing are color coded according to ISO standards for easy identification of catheter gauge

Automatic needle retraction occurs with slight depression of the needle housing. Once activated, the needle is safely retracted into the housing, reducing the risk of needlestick injuries
